

# Secrets in the Sand

March 1997  
28 min., 53 min.  
NTSC/PAL/SECAM  
*Available in English*

The killer is so tiny it cannot be seen with the naked eye. Biological weapons, one of the most terrifying forms of modern warfare, are incredibly difficult to detect, defend against or eliminate, yet alarmingly easy to create and use.

Presenting never-before-seen footage, *SECRETS IN THE SAND* follows a United Nations multinational team of inspectors deep into the remote deserts of Iraq, as they search for, and find, traces of a biological weapons programme. The U.N. Special Commission has set up the most comprehensive monitoring system in the world to make sure that Iraq does not resume production of the deadliest of all weapons of mass destruction.
